Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Part III DETAILED ACTION

Notice to Applicant(s)

1. This action is responsive to the following communications: amendment filed on 5/26/04.
2. This application has been reconsidered. Claims 89-94 are pending.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 89-94 are rejected under 35 U.S.C. 103(a) as being unpatentable over Evers (U.S. 5,335,267) in view of Fedde (U.S. 4,533,956).

With respect to claims 89-94, Evers discloses a character data processing method (figure 1) comprising a conversion unit (11) which converts character (text) code data for a personal computer (column 4, lines 53-60 and column 3, lines 27-39) into character code for facsimile machine (code coincident with facsimile 53) (column 3, lines 17-26 and column 6, lines 3-23) by using a character code conversion table (11) (column 6, lines 21-23) in accordance with a data registration instruction to the facsimile machine from the computer (which reads on a command set is transmitted to the conversion module) (column 3, lines 17-19); a storage unit (19) for storing the facsimile character code (column 5, lines 14-28); a transmission unit which transmits the facsimile code to the facsimile machine (column 3, lines 17-26 and column 7, lines 28-40).

Evers differs from claims 89-94 in that he does not clearly disclose inversely converting the character code for the facsimile machine into the key code for the personal computer by referring to a conversion table.

Fedde discloses an apparatus for converting facsimile coded data to video data utilizing a look-up table (column 3, lines 12-31). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Evers by the teaching of Fedde in order to enable the viewing of the facsimile data.
